SAIMS Frontend Development – Day 1 Report

Date: 26 March 2026
Team Size: 6 Members
Focus: Frontend Planning & Design Architecture

UI/UX Design:
The team finalized a **light-themed, modern SaaS interface** focused on simplicity and elegance. The design will include clean layouts, soft shadows, smooth animations, and full responsiveness. Video-based elements such as subtle background videos, animated transitions, and interactive motion effects will enhance the user experience.

Role-Based Dashboards:
Three distinct dashboards were planned:

- **Student:** Assignments, deadlines, internship tracking
- **Teacher:** Assignment creation, grading, submission monitoring
- **Admin:** Analytics, user management, reports

Each dashboard will have a unique layout tailored to its role.

Tech Stack & Structure:
The frontend will use React (Vite), Tailwind CSS, React Router, Zustand, and Axios (mock API). A modular structure with reusable components (buttons, cards, tables, modals) will ensure scalability and consistency.

Core Features:
Planned modules include authentication, assignment management, grading system, internship tracking, admin panel, and reports. Global features like notifications, loaders, and error handling will also be implemented.

Work Distribution:
Tasks were divided among six members:

- Auth & routing
- Student dashboard
- Teacher dashboard
- Admin panel
- Internship module
- UI components & animation

Outcome

The team established a clear design direction, finalized the tech stack, structured the application, and assigned responsibilities, creating a strong foundation for development.
